GoodData.CN Editions	
Non-Production Editions	
GoodData.CN Community Edition	<p>The GoodData.CN Community Edition includes:</p> <ul style="list-style-type: none"><li>• Unlimited number of Workspaces with self-service analytics (Analytical Designer and Dashboards)</li><li>• All supported Data Source Connectors (currently PostgreSQL, Redshift, Snowflake, Vertica)</li><li>• Multitenancy (Managed Workspaces and Workspace Hierarchy)</li><li>• Packaged as a single Docker image</li><li>• Support through <a href="#">GoodData Community</a> and a <a href="#">Slack workspace</a></li></ul> <p>No additional purchases are possible for the GoodData.CN Community Edition. Available for non-production use only.</p>
Production Editions	
GoodData.CN FREE Edition	<p>The GoodData.CN FREE Edition includes:</p> <ul style="list-style-type: none"><li>• Unlimited number of Workspaces</li><li>• Data Source Connectors: PostgreSQL and Vertica</li><li>• Deployment through Kubernetes technologies</li><li>• Support through <a href="#">GoodData Community</a> and a <a href="#">Slack workspace</a></li></ul> <p>No additional purchases are possible for the GoodData.CN FREE Edition. GoodData.CN FREE Edition comes with a 90 day free trial of all GROWTH and ENTERPRISE Edition features and modules described herein (except for GoodData.CN Enterprise Support Services).</p>
GoodData.CN	<p>The GoodData.CN GROWTH Edition includes:</p> <ul style="list-style-type: none"><li>• Multitenancy (Managed Workspaces and Workspace Hierarchy)</li></ul>

<p>GROWTH Edition</p>	<ul style="list-style-type: none"> <li>• Data Source Connectors: PostgreSQL, Vertica</li> <li>• Metric Editor</li> <li>• Deployment through Kubernetes technologies</li> <li>• Support through <a href="#">GoodData Community</a> and a <a href="#">Slack workspace</a></li> <li>• Analytical Designer and Dashboards for all Your Workspaces</li> <li>• Option to purchase the following additional modules:</li> <li>• Redshift Data Source Connector</li> <li>• Snowflake Data Source Connector</li> </ul> <p>GoodData.CN GROWTH Edition has a minimum contract value requirement as defined by the GoodData.CN Price List. GoodData.CN GROWTH Edition comes with a 90 day free trial of all GROWTH and ENTERPRISE Edition features and modules described herein (except for GoodData.CN Enterprise Support Services).</p>
<p>GoodData.CN ENTERPRISE Edition</p>	<p>The GoodData.CN ENTERPRISE Edition includes:</p> <ul style="list-style-type: none"> <li>• Multitenancy (Managed Workspaces and Workspace Hierarchy)</li> <li>• Data Source Connectors: PostgreSQL, Vertica</li> <li>• Metric Editor</li> <li>• Federated Data Queries</li> <li>• Deployment through Kubernetes technologies</li> <li>• GoodData.CN Enterprise Support Services</li> <li>• Analytical Designer and Dashboards for all Your Workspaces</li> <li>• Option to purchase the following modules:</li> <li>• Redshift Data Source Connector</li> <li>• Snowflake Data Source Connector</li> </ul> <p>GoodData.CN ENTERPRISE Edition comes with a 90 day free trial of all features and modules available for GoodData.CN as described herein.</p>

## Product Features / Modules

### GoodData.CN

GoodData.CN is a cloud-native data analytics product that can be deployed on-premises (AWS, MS Azure, Google Cloud) by using Docker or Kubernetes technologies. GoodData.CN is available in non-production and production editions (“Edition(s)”), as described above. Each Edition comes with access to GoodData.UI, includes embedding capabilities, an API layer, and other tools and functionality as further described in the GoodData Documentation.

### Data Source

Data Source means a logical object that represents the database or data warehouse where Your source data

is stored. All GoodData.CN Editions include connectivity to PostgreSQL and Vertica data sources and it is possible to purchase additional data sources connectors as described above (each a “Data Source Connector”).

## Workspace

A workspace is an environment where You organize and create Your analytics. It contains information about a database, a logical data model, dashboards, insights, and measures. Paid Workspaces in GROWTH and ENTERPRISE Editions include access to self-service analytics in the form of GoodData Analytics Designer and Dashboards.

## Multitenancy (Managed Workspaces and Workspace Hierarchy)

Multitenancy allows You to use Workspace Hierarchy and enables Managed Workspaces with Data Filtering. Data Filtering allows You to narrow the scope of an insight without changing the insight itself. Workspace Hierarchy allows You to designate parent Workspaces and subordinate child Workspaces, which includes the inheritance of all parent Workspace objects.

Multitenancy comes with the following functional limitations:

- No distinction in User rights within one organization (i.e. each User can access and edit all Workspaces in one deployment).

## Metric Editor

The Metric Editor is a graphical user interface tool for creating Your own metrics to use in the Analytical Designer or through the API. The editor uses facts and attribute labels from Your logical data model (LDM) and other metrics in Your Workspace to help You build MAQL expressions with valid syntax.

## Federated Data Queries

Ability to federate queries from GoodData.CN analytical engine to multiple combines underlying data sources through Data Source Managers (DSM). DSM manage the operation of other Data Sources. You can use DSMs to connect to Data Sources that GoodData does not support (such as MySQL), or You can use them to federate information from multiple data sources in one Workspace.

## GoodData Support

Support Services for GoodData.CN are further described in the GoodData Support Policy, available at: <https://www.gooddata.com/support-policy-gooddata-cn>.
