Last Updated: October 24, 2024

GoodData.CN Editions	
GoodData.CN ENTERPRISE Edition	<p>The GoodData.CN ENTERPRISE Edition includes:</p> <ul style="list-style-type: none"><li>• Multitenancy (Managed Workspaces and Workspace Hierarchy)</li><li>• Data Source Connectors: PostgreSQL, Vertica</li><li>• Metric Editor</li><li>• Federated Data Queries</li><li>• Single deployment through Kubernetes technologies</li><li>• GoodData.CN Enterprise Support Services</li><li>• Analytical Designer and Dashboards for all Company's Workspaces</li><li>• Option to purchase additional Data Source Connectors supported for GoodData.CN (list available at: <a href="https://www.gooddata.com/developers/cloud-native/doc/cloud/connect-data/">https://www.gooddata.com/developers/cloud-native/doc/cloud/connect-data/</a>).</li></ul>

## Product Features / Modules

### GoodData.CN

GoodData.CN is a cloud-native data analytics product that can be deployed on-premises (AWS, MS Azure, Google Cloud) by using Kubernetes technologies. GoodData.CN is available in editions (“**Edition(s)**”), as described above. Each Edition comes with access to GoodData.UI, includes embedding capabilities, an API layer, and other tools and functionality as further described in the GoodData Documentation.

### Data Source

Data Source means a logical object that represents the database or data warehouse where Company's source data is stored. All GoodData.CN Editions include connectivity to PostgreSQL and Vertica data sources and it is possible to purchase additional data sources connectors as described above (each a “**Data Source Connector**”).

### Workspace

A Workspace is an environment where Company organizes and creates its analytics. It contains information about a data source, a

logical data model, dashboards, visualizations, metrics and additional metadata. Access to and use of Workspaces are on a subscription basis. Company shall provision at least one (1) Workspace for each of its Customers (i.e. individual Customers (domains) should be separated into individual Workspaces). Each User Data Permission Filter may be assigned to 1) unlimited Users within the Company, or 2) unlimited Users within a single Company's Customer. If Company uses User Data Permission Filters to separate its individual Customers within one Workspace, each discrete Customer will be considered and charged as a separate Workspace.

### Multitenancy (Managed Workspaces and Workspace Hierarchy)

Multitenancy allows Company to use Workspace Hierarchy and enables Managed Workspaces with Data Filtering. Data Filtering allows Company to narrow the scope of an insight without changing the insight itself. Workspace Hierarchy allows Company to designate parent Workspaces and subordinate child Workspaces, which includes the inheritance of all parent Workspace objects.

### Metric Editor

The Metric Editor is a graphical user interface tool for creating Company's own metrics to use in the Analytical Designer or through the API. The editor uses facts and attribute labels from Company's logical data model (LDM) and other metrics in Company's Workspace to help Company build MAQL expressions with valid syntax.

### Federated Data Queries

Ability to federate queries from GoodData.CN analytical engine to multiple combines underlying data sources through Data Source Managers (DSM). DSM manage the operation of other Data Sources. Company can use DSMs to connect to Data Sources that GoodData does not support (such as MySQL), or Company can use them to federate information from multiple data sources in one Workspace.

### GoodData Support

Support Services for GoodData.CN are further described in the GoodData Support Policy, available at: <https://www.gooddata.com/support-policy-gooddata-cn>.

For the current pricing of any product features, please contact us at [sales@gooddata.com](mailto:sales@gooddata.com).

Any capitalized terms not defined herein shall have the same meaning as in the respective GoodData agreement which Company agreed to and which governs its use of Software.

These GoodData.CN Product Specific Terms form a part of the agreement between Company and GoodData. GoodData reserves the right to modify, change and update these GoodData.CN Product Specific Terms at any time, at its sole and exclusive discretion. GoodData will provide Company notice of material changes to these GoodData.CN Product Specific Terms on the GoodData Support portal. Company's continued use of the Software after receiving such notice shall constitute Company's acceptance of any such changes to these GoodData.CN Product Specific Terms.
